

## 2010 WNTI Annual Report

### Montana- Therriault Creek Habitat Improvement

Project: 61220-2006-903 6 Restoring Bull Trout in the Therriault Creek Drainage,  
Lincoln County, Montana

In 2010, the following revegetation treatments were installed to achieve the project goals of restoring riparian vegetation at the Therriault stream and wetland restoration site.

Revegetation treatments included planting large containerized plant material at downstream locations within the project area and placement of additional woody debris within the stream channel. The existing riparian fencing was removed and reinstalled to provide a wider buffer for riparian plant growth adjacent to the stream channel. Partners included the Vredenburg Ranch, Geum Environmental Consulting, Kootenai River Network, Montana Fish, Wildlife and Parks, Montana Partners for Fish and Wildlife, and the Youth Conservation Corp.
